

CLEANTECH VENTURE DAY 2009 DAY

The outlook for energy, in terms of supply and price, remains uncertain and geopolitical challenges create further uncertainties. Industries and organizations should consider the widest possible variety of options for reducing energy consumption. For investors, the latest energy efficiency technologies and solutions offer scalable investment opportunities.

Cleantech Venture Day 2009 November 26, Lahti, Finland

Pre-event dinner on Wednesday, November 25.
By invitation only.

Get acquainted with the fastest growing cleantech segments in 2009/10 boosted by the energy efficiency and industry business drivers.

- Extensive networking opportunity with European as well as emerging markets investors
- Key note speakers and in-depth panel discussions between investors and leading corporate technology funds in cleantech
- Industry business opportunities integrating energy efficiency and power electronics applications
- Carefully selected and pre-screened Nordic deal-flow in the areas of smart electricity and transportation based on smart grids and metering, energy storage and hybrid power generation technologies
- Pitching and deal-making opportunities with leading venture capitalists, corporate venture funds and industry leaders

The organizers of the Day are Lahti Science and Business Park in co-operation with Cleantech Scandinavia and Cleantech Invest.

Smart electricity: The fastest growing sector integrating power electronics and energy efficiency

In 2009, Smart grid companies represent the biggest and fastest growing sector in cleantech. It has potential to reduce up to 30 percent of electricity consumption. It has attracted a record of USD 350 mln investments in 2008 (+ 300 % Y/Y). The transition of smart grid solutions providers, from addressing early adopters to undertaking large scale implementation may encourage a spurt of M&A activity (Deloitte 2009). Based on the strong both ICT and power industry background, the Nordic technologies are leading the way to what now appears inevitable throughout the EU and beyond.
